

Nexsteps
Forward Together

Business Plan

Forward Together

A multi-tenant SaaS for schools and community organisations to run attendance, scheduling and rota operations with safeguarding-by-default.

Prepared for: internal planning, advisors and stakeholders

1. Executive Summary

Nexsteps is a UK-focused, safeguarding-first operations platform for organisations responsible for children, young people, and volunteers. It replaces fragmented tools (spreadsheets, WhatsApp, separate safeguarding logs and email chains) with one auditable system that improves data quality, reduces safeguarding risk, and saves admin time.

One-line positioning: Nexsteps is a multi-tenant SaaS for schools and community organisations to run attendance, scheduling and rota operations with safeguarding-by-default (RBAC, audit trails, retention and DSAR readiness).

Commercial intent: subscription SaaS with land-and-expand from single-site customers (Starter) to multi-site organisations (Growth) and Trust/MAT accounts (Enterprise).

2. Problem, Customer Pain and Opportunity

Across schools, clubs, churches and charities, the same operational pattern repeats:

- Fragmented operations: registers, rota spreadsheets, group chats, separate safeguarding records and inconsistent follow-ups.
- Low trust in data: attendance is late or inaccurate, reporting is manual, and actions are missed.
- Safeguarding risk: inconsistent handling of concerns, weak access control, and limited audit trails.
- Multi-site complexity: trusts and multi-location organisations struggle to standardise workflows and roll up reporting.

3. Solution and Product Overview

Nexsteps brings five core capabilities into one coherent workflow:

- Attendance: fast session registers (web now; mobile planned) with reporting and exports.
- Scheduling and rotas: assign staff/volunteers, track coverage, reduce gaps and cancellations.
- Safeguarding: notes/concerns with strict role-based access control, audit trail and retention/DSAR hooks.
- Communications: email workflows with SMS as a metered add-on pack.
- Reporting: dashboards and export jobs, including roll-up reporting at higher tiers.

4. Market and Ideal Customer Profile

Primary segments:

- Schools: primary and secondary, academies, and multi-academy trusts (MATs).
- Clubs: sports clubs and youth organisations managing recurring sessions and volunteers.
- Churches: children and youth ministries with safeguarding requirements and rotating teams.

- Charities: youth and community programmes with reporting and compliance needs.

5. Differentiation and Competitive Advantage

- Safeguarding-by-default: strict RBAC, audit trails and retention/DSAR foundations are non-negotiable.
- One workflow, not five tools: attendance, rota, safeguarding, comms and reporting in a single system of record.
- Multi-tenant architecture designed for multi-site organisations and roll-up reporting at higher tiers.
- Offline-first mobile attendance (planned): reliable registers even with poor connectivity, then sync.
- Usage-based packaging (AV30): a fair billing metric aligned to active staff/volunteers rather than raw headcount.

6. Business Model and Pricing

Nexsteps is sold as a subscription SaaS with monthly or annual billing. Packaging uses AV30 (unique active staff/volunteers in the last 30 days) as the primary usage metric, with add-ons that expand capacity and capabilities.

6.1 Core plans

Plan	Monthly	Annual	Included Capacity (AV30)	Sites	Ideal Customer
Starter	GBP 149	GBP 1,490	50	1	Single-site clubs and small schools
Growth	GBP 399	GBP 3,990	200	Up to 3	Most schools and larger clubs
Enterprise / Trust	GBP 1,200+	GBP 12,000+	600+ (custom)	10+ (custom)	MATs and multi-site orgs

6.2 Add-ons (illustrative catalogue)

Add-on	Unit	Monthly	Annual	Notes
Extra AV30 Block	50 AV30	GBP 75	GBP 750	Stackable; increases cap only
Extra AV30 Block	200 AV30	GBP 250	GBP 2,500	Stackable; best value for larger orgs
Extra Sites Pack	2 sites	GBP 99	GBP 990	Only if multi-site enabled for tenant
Storage Pack	100 GB	GBP 25	GBP 250	For file uploads, evidence, exports
Export Jobs Pack	100 jobs	GBP 19	GBP 190	For scheduled or batch exports

Add-on	Unit	Monthly	Annual	Notes
SMS Pack	1,000 SMS	GBP 45	GBP 450	Messaging usage; paired with provider costs

6.3 Usage enforcement (recommended rules)

- Soft cap warning: notify admins when usage approaches 100% of purchased AV30.
- Grace window: allow up to ~110% for ~14 days while prompting upgrade/add-on purchase.
- Hard cap: around ~120% block billable actions (e.g., publishing schedules, exporting reports) until capacity is purchased.
- Admins can view who counts toward AV30 and export the audit list.

7. Go-to-Market Strategy

Nexsteps is designed to be sold through a simple funnel: lead capture on the marketing site, nurture, then demo and rollout calls.

7.1 Lead generation

- Lead Magnet A: Safeguarding & Ops Readiness Score - a 3-minute assessment producing a score, risk areas, and a recommended plan CTA.
- Lead Magnet B: Attendance + Safeguarding Toolkit - downloadable templates (register, incident form, consent template, onboarding checklist, weekly checklist).
- Nurture: automated sequences that move leads from toolkit/assessment to a rollout call.

8. Product Delivery and Operations

Nexsteps is founder-built with a modern TypeScript stack and a multi-tenant security model designed for sensitive safeguarding data.

8.1 Technical approach (summary)

- Web: Next.js (App Router) for marketing and admin.
- Mobile: React Native / Expo (planned) for offline attendance and on-the-go workflows.
- Data: Postgres + Prisma with tenant isolation via Row-Level Security (RLS).
- Infra: UK/EU data residency target (AWS eu-west-2 London), S3 for files, Redis/queues for jobs.

9. Roadmap and Milestones

9.1 Next 90 days (delivery priorities)

- Mobile app MVP: offline attendance capture with reliable sync.
- Onboarding flows: tenant creation, roles, roster import templates, first sessions setup.

- Billing admin: plan selection, add-ons, usage meter, upgrade UX.
- Reporting hardening: export jobs, templates, scheduled bundles.

10. Key Metrics (KPIs) to Track

- Lead capture rate (visitor to lead) and lead-to-demo rate.
- Activation: time-to-first-register and time-to-first-report/export.
- Retention: logo retention and expansion (Starter to Growth).
- Unit economics: gross margin, payback period, support hours per customer.

11. Financial Overview (Assumptions and Model Notes)

This business plan is pre-trading. The financial model is built from pricing, expected delivery costs, and conservative adoption assumptions. A future bank pack will add proof such as pipeline, waitlist counts, signed pilots and statements.

12. Risks and Mitigations

- Product completeness risk: ship the smallest viable mobile MVP first; prioritise end-to-end flows over new modules.
- Safeguarding and data risk: strict RBAC + tenant isolation, audit trails, secure hosting; clear incident response.
- Sales cycle length: start with clubs and small schools for faster closes; land-and-expand.
- Support load: standardise workflows and package onboarding to reduce ad-hoc support.

13. Open Decisions (To Finalise During Pilot)

- Pilot offer: pricing, length, onboarding scope and success criteria.
- Exact feature boundaries by plan (Starter vs Growth vs Enterprise).
- Which actions are blocked at hard cap vs remain read-only.
- Support response targets and SLA terms.

Appendix: Summary of the Offer

Nexsteps promise: One system that captures attendance and people operations correctly, while making safeguarding consistent, auditable and easy to run. The product sells outcomes: fewer missed incidents, hours saved each week, more predictable coverage through rotas, and leadership visibility through reporting.
